Nursing Patients with Cancer

Carol Banks 2006-02-03 This book introduces the reader to the complexities and special issues surrounding the care of people with cancer. It provides the knowledge and skills necessary to deliver patient-focused care that enhances the quality of life and meets the needs of patients and their families. The text is replete with examples from the daily experiences of oncology nurses. Highlighted boxes include common classifications of critical care drugs for specific disorders, including drug, actions, dosage, and adverse effects. However, this book is more than a drug reference. It provides nurses with a comprehensive evidence-based source book that provides a detailed foundation for adult cancer nursing. It encourages federal and state agencies and private organizations to accelerate the collection of data on pain incidence, severity, and patient satisfaction with pain management. The book comprises many aspects of pain treatment and the drugs involved in it. From old analgesics with new mechanisms of action to the newest opioids, there is something for everyone.
