Pocket Mouse—Pam Adams 1996 No child will ever be lonely with a Pocket Pal. Pocket Pals are a great early reading resource, full of real information about animals from all over the world. Pocket Pals are appealingly shaped, easy to keep clean and eminently collectable. A sturdy die cut book just right for tiny hands and parents' pockets, each in the "Pocket Pals" series shows favorite animals and its activities. The simple text and pictures make observations about each animal’s most common characteristics.

Movements, Populations, and Habitat Preferences of Three Species of Pocket Mice (Perognathinae) in the Big Bend Region of Texas—Richard D. Porter 2011 Population characteristics and habitat preferences of Merriam's pocket mouse (Perognathus merriami), Nelson's pocket mouse (Chaetodipus nelsoni), and the Chihuahuan pocket mouse (C. eremicus) in the Big Bend region of Texas were studied intensively over 26 months. Steep slopes limited the distribution and abundance of Chihuahuan pocket mice but not the other two species. Merriam's pocket mice normally were not present on steep slopes because of the usual occurrence of tall, dense vegetation on these sites, but they did occur there when the understory vegetation was sparse and short and there were either large boulders or fine gravels. Nelson's pocket mice were most abundant on slopes >20%, P. merriami on slopes 3-10%, and C. eremicus on slopes

**Mouse Vacation**-Philip Roy 2016-10-30 Fiction. Children's Literature. Illustrated by Andrea Torrey Balsaran. In this fourth volume of the beloved "Happy the Pocket Mouse" picture book series, Happy and his human friend John debate where their next adventure should take them. John suggests a walk through the forest or a visit to the museum, but these are too lacklustre for Happy's thirst for excitement. When Happy proposes a grand vacation to the likes of New York or Paris, John reasons that those places are too expensive and that they will have to compromise. Happy then suggests a camping trip in New Zealand, but John contends that it is too far away. "Why am I the only one compromising here?" Happy questions. In the end, Happy and John embark on an overnight bus trip to the seaport to view the majestic Tall Ships, and Happy is enthralled by these "ghosts of the past." Andrea Torrey Balsara brings to life the Eiffel Tower, the Taj Mahal, the Great Pyramids, and other exotic locales with 32 pages of brilliant, full-colour illustrations.

**Adaptation and Natural Selection**-George Christopher Williams 2018-10-30 Biological evolution is a fact—but the many conflicting theories of evolution remain controversial even today. When Adaptation and Natural Selection was first published in 1966, it struck a powerful blow against those who argued for the concept of group selection—the idea that evolution acts to select entire species rather than individuals. Williams's famous work in favor of simple Darwinism over group selection has become a classic of science literature, valued for its thorough and convincing argument and its relevance to many fields outside of biology. Now with a new foreword by Richard Dawkins, Adaptation and Natural Selection is an essential text for understanding the nature of scientific debate.

**Revision of the North American Pocket Mice (Classic Reprint)** Clinton Hart Merriam 2017-10-27 Excerpt from Revision of the North American Pocket Mice The Division of Ornithology and Mammalogy is engaged in mapping the geographical distribution of birds and mammals, in addition to the study of their economic relations. The purpose of this work is to as certain the boundaries of the natural faunal areas of North America. The original information on which the maps are based is collected mainly by special field agents employed by the Division; a smaller portion is contributed by voluntary observers. In the progress of the work many new facts are obtained which ought to be put on record for the benefit of other workers in this department of science. It is not unusual to find new species in the collections made by the field agents of the Division, and such species must be named and assigned their proper systematic position before they can be discussed intelligently. It is evident that the results of the investigations of the Division are of importance to two distinct classes of readers - farmers and naturalists. It is deemed desirable, therefore, to publish such of the results as are of use mainly to those engaged in scientific research separately from those of a more purely economic character. The publication of the economic material being already provided for (and appearing as bulletins and reports), it has been decided to publish a series of faunal papers, under the title north american fauna. This publication will contain, in addition to the faunal papers proper, such technical matter as results from the study of the material collected or as may be necessary to an intelligent understanding of the reports which follow. No attempt will be made to issue the separate numbers at regular intervals, but each number will bear date of actual publication. The present is the first of the series.
